# ASSET MONITORING
# ENGINEERED FOR INTELLIGENCE

Facts about your fleet are critical to making business decisions that will improve efficiency. There is a spectrum of solutions for equipment monitoring - at one end, there are GPS tracking devices that send a few updates per day. This is insufficient for managing the operations of diverse transportation fleets, rail yards, construction projects or urban delivery fleets that require near real-time information. The BlackBerry Radar-L device was born from demand for a price-optimized product targeted at improving the accuracy and usability of equipment monitoring. It is specifically designed for rapid installation on flatbeds, chassis, containers, heavy machinery and other valuable transportation or equipment assets. It's built on the same platform and stringent environmental specifications as the Radar-M.

## RADAR-L | AN INNOVATIVE DEVICE

**Ten Minute Install**
Self-powered device can be surface mounted to almost any location on equipment using only four bolts
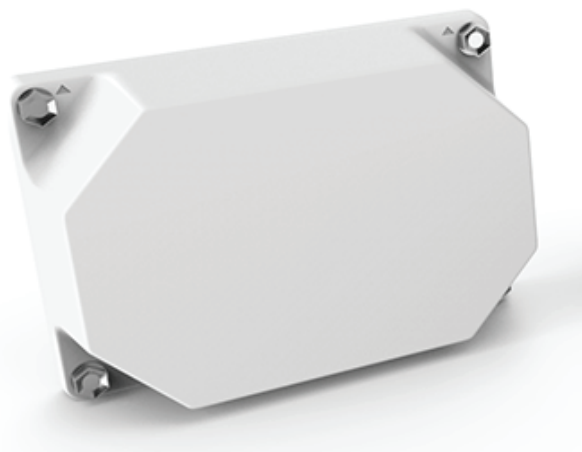

**Multiple Integrated Sensors**
Total trailer visibility, including built-in location, door state (open/closed), motion, miles driven, and more

**Multi-Year Battery**
Easily replaceable battery with configurable multi-year lifespan. Minimal maintenance required - no charging no wiring, weatherproof, and shockproof

**Future-Proof**
The device automatically receives software updates and feature enhancements over the air

**PART NUMBER** PRD-62963-001

## MORE DATA MEANS MORE INFORMED DECISIONS FOR YOUR BUSINESS

**Five Minute Sensor Readings**
Multi-sensor measurements are taken every five minutes not just on stop/start activities like standard GPS providers

**Configurable Updates**
Upload sensor readings every 30 or 60 minutes based on remotely managed device configuration options and customer requirements

**Cloud-Based Intelligence**
Further transforms sensor data into vital and valuable operational data, such as mileage and asset utilization

**Instant Alerts & Alarms**
Manage day-to-day operations more effectively with event-driven notifications such as door open/close events for theft alerts

**Intuitive Map Views**
Provides fleet managers with a visual representation of operations so they can react quickly and intelligently

**Integrated Data Analytics**
Perform time-based analysis and visualize trends across trailers, fleets, routes, and yards. Optimize your and your customers' businesses.
